

Front end development

HTTP - Star Ex2

The following exercise contains the following subjects:

- HTTP
- Axios

Question

On the main page, have two components - one for showing all of the products from the server, with a button to the side of each one that lets you delete the product from the server, and a form component for adding a new product to the server.

The form should include two input fields - one for the name (string) and another field for the avatar's url (string).

Remember to show the product in the list after it is created, and to hide it after it has deleted
